

Installing Orange 3 through Anaconda Navigator

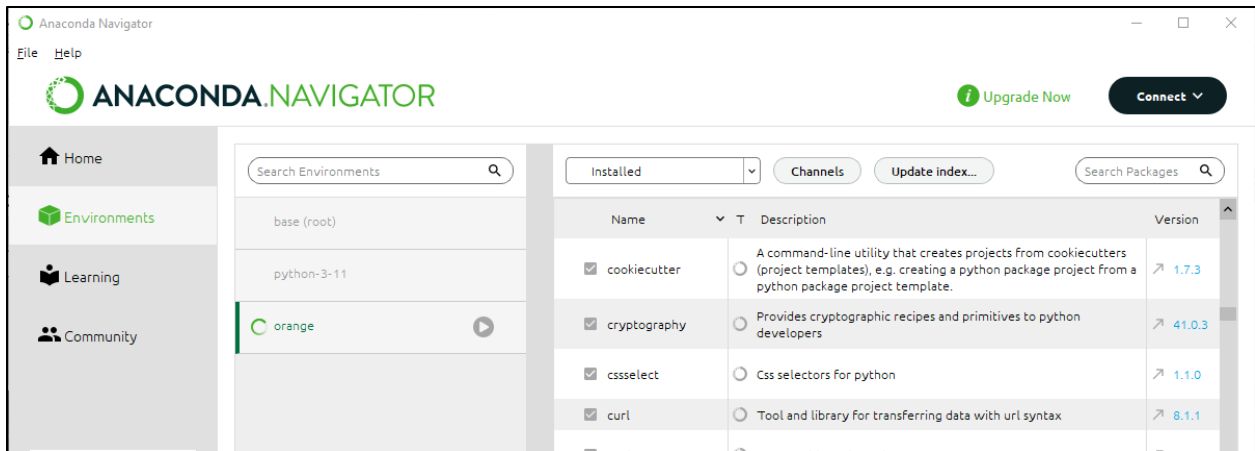

Go to “Environments”

Create a new Environment. Name it whatever you like. Here, I chose “orange”. Make sure some version of Python is selected as in the image below.

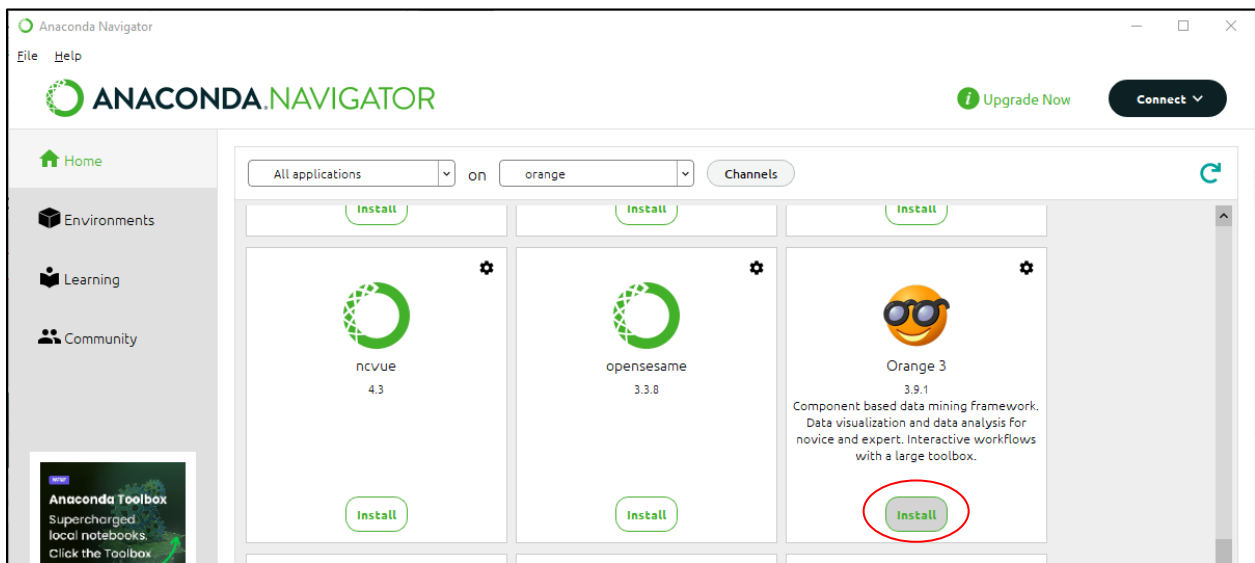

The new environment will be created and automatically selected as the active environment.

Go back to “Home” and scroll to find the Orange 3 application tile. Click “Install”.

This may take a long time.

Once complete, you should now see the Orange 3 tile near the top of the list with a blue “Launch” button as shown below. You may now launch Orange 3 😊.
